MC100 LED Player Instructions

Initial Startup

output: as below You can use the HDMI / DVI adapter cable attached to the sending card. or you can also connect the Gigabit output port to the receiver card directly(Note: if the big screen is not displayed,pls select the appropriate receiver card in the display settings of the software, see below, "how to choose to receive the card?").

Then starting to see a picture

MC100 V1.86

After completion of the moment just started, you'll see a short blue screen.

192.168.0.102

if connect the internet right,you will see the IP address

null

if not connect the internet ,it looks like this :NULL

If the player can work with the network, you can use the computer directly to control large screen,it is very convenient. You can put network cable into the player's Ethernet port directly the, then connect with the exchanger on the other side.

● How to set the screen size?

Installation MC100 Setup.exe ,or download MC100at: www.linsnled.com Download Center

Run MC100 Program edit management software on the computer  . Click "Main Menu -> View-> LED screen settings."

initial password:168 ,named LED here and specify its size, as well as other settings

type of receiving card, you can enter SendCard page, set " Recv Card Model ".

After setting, it must be uploaded to the LED. One is through the Internet (prior to the player network cable connected), one is through U disk.

Address:Building 3,Sanlian Industrial Park,Shiyan Town,Bao'an District,Shenzhen,China.

(1) Internet upload or LAN, click .

There is a small problem, how can I know the big screen's IP address? This needs you to watch when the big screen IP network is starting up, or, you can scan the entire network, view IP: Click Menu -> View -> Monitoring LED screen -> Find a large screen.

(2) Upload settings for U disk: plugged U disk, click on the bottom right of the screen to set the screen

. Then plug U disk into the player on the big screen. U disk upload process is very fast, the screen will have prompts.

Remarks: If you just want to change the size of the program player window, it is simple

click the icon  (Or menu / View / Set display window size)

● How to set the type of receiving card? How to switch gigabit transmission and DVI send?

Player default working in Gigabit port transmit mode. If the large screen is not displayed, you need to select the screen settings for receiving card.

Menu -> Administration -> Display settings -> Send card -> select the "Enable built-in Gigabit transmission": as the following figure.

If the receiving card is another type, you can only use the DVI output.

USD DVI output, need select "enable external sending card" and then use HDMI / DVI adapter cable attached to the sending card. (If you do not use enable external sending card, you will find no text in DVI mode, or the screen is black.)

● How to upload the program? How to switch the current program?

First big screen need connect network cable (or wireless usb wifi), and then run the mc100, you can upload the new program. Menu -> Administration -> Monitoring LED screen -> Find, select the screen -> Upload program. If you want to switch the current program, you can click on the "play the selected program" in the "Program Management Page". If there is no network, or the network is slow, it can only use to upload a new program by U disk.

● How to use U disk to upload program?

Please click the green U disk icon on the main interface toolbar. as below picture :

Address: Building 3, Sanlian Industrial Park, Shiyuan Town, Bao'an District, Shenzhen, China.

Then, plug the U disk into the big screen, you will see the "reading U disk" Word. Some of the large programs, will take some time to upload. Some smaller, flash on the message will ok

How to connect the player with a network cable box? How to set a fixed IP?

Sometimes, you need t a laptopconnect to the network cabledirectly to adjust the player box . Player Cable network default is dynamic IP, so you need to set a fixed IP player on the list. For example, you can set to 192.168.0.16 then, you put your notebook also set to 192.168.0.5 (same network segment). Then you can directly connect.

Setting method is: the screen settings -> Wired Network -> Using fixed IP. After setting, you can use U disk upload. Then you can direct the.

Moreover, after the big screen starts again, it will be the fixed IP.
